■ HANDLING PRECAUTIONS FOR TRAVERSE DECK

The laser diode in the traverse deck (optical pickup) may break down due to potential difference caused by static electricity of clothes or human body.
So, be careful of electrostatic breakdown during repair of the traverse deck (optical pickup).

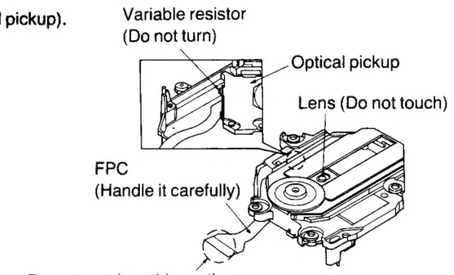
•Handling of traverse deck (optical pickup)

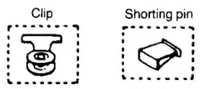
1. Do not subject the traverse deck (optical pickup) to static electricity as it is extremely sensitive to electrical shock.
2. To prevent the breakdown of the laser diode, an anti-static shorting pin is inserted into the flexible board (FPC board). When removing or connecting the short pin, finish the job in as short time as possible.
3. Take care not to apply excessive stress to the flexible board (FPC board).
4. Do not turn the variable resistor (laser power adjustment). It has already been adjusted.

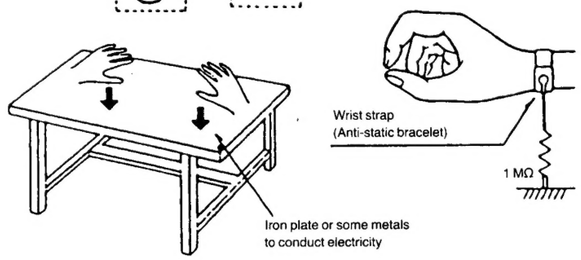
•Grounding for electrostatic breakdown prevention

1. Human body grounding
   Use the anti-static wrist strap to discharge the static electricity from your body.
2. Work table grounding
   Put a conductive material (sheet) or steel sheet on the area where the traverse deck (optical pickup) is placed, and ground the sheet.

Caution:
The static electricity of your clothes will not be grounded through the wrist strap. So, take care not to let your clothes touch the traverse deck (optical pickup).







■ DISASSEMBLY INSTRUCTIONS

<CD SECTION>

Caution:
•It is very dangerous to look at or touch the laser beam. (Laser radiation is invisible.)
With the unit turned "on", laser radiation is emitted from the pickup lens.
Avoid exposure to the laser beam, especially when performing adjustments.

•The CD P.C.B. requires manual adjustment for all of the following items:

(1) Best eye pattern (PD balance)
(2) Focus offset
(3) Tracking offset
(4) Focus gain
(5) Tracking gain
(6) Tracking balance
(7) Angle of elevation

In the RX-DT707 CD P.C.B., a servo processor (IC702: MN66271) automatically adjusts items ② through ⑥ of the seven items listed above. Auto adjustment is performed when:

1. A CD is loaded or replaced, or
2. The unit is turned on with a CD in the drive.

*The auto adjustment procedure is reset when the CD P.C.B. is turned off.

•Preparation for Adjustment

1. Set up the unit following the procedure described in "Checking and Adjusting the CD P.C.B.". (See page 47.)
2. After completing the setup procedure, switch the unit off then switch it on again (to adjust the unit with the CD unit placed in an upright position).

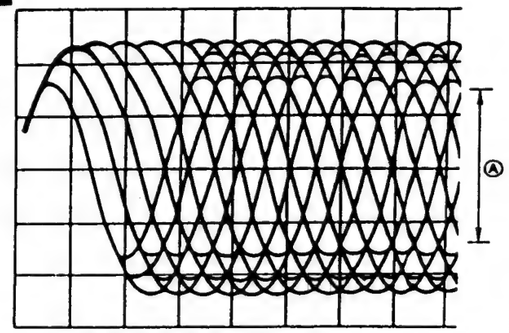
(1) MECHANICAL ADJUSTMENT

•When the traverse deck is replaced, making adjustments is not necessary. (The traverse deck ass'y is already adjusted.)
•Make adjustments to improve playability when the traverse deck has not been replaced. Make the electrical adjustments first.

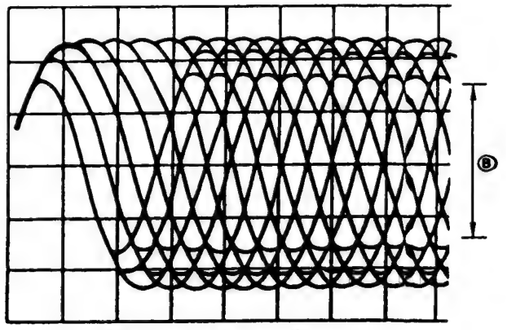
1. Connect the oscilloscope's CH. 1 probe across TJ701 (+) and TJ702 (VREF) on the Servo P.C.B.
   Oscilloscope setting:
   VOLT ..... 200 mV
   SWEEP ..... 0.5 µsec
   Input coupling ..... AC
2. Switch the player power **ON**, and play track **19** on the test disc (SZZP1056C).
3. Leave the player in Play mode and place it as shown in the figure on the right.
4. Alternately adjust the two mechanical adjusting screws with the 2.0 mm allen wrench (SZZP1101C) until the RF signal amplitude on the oscilloscope is maximize. (Shown in Fig. 7)
5. After completing the adjustment, lock the **mechanical adjustments** with lock paint (RZZ0L01).



Ⓐ **Maximize the amplitude.**

(2) BEST EYE (PD BALANCE) ADJUSTMENT

1. Connect the oscilloscope's CH. 1 probe across TJ701 (+) and TJ702 (VREF) on the Servo P.C.B.
   Oscilloscope setting:
   VOLT ..... 200 mV
   SWEEP ..... 0.5 µsec
   Input coupling ..... AC
2. Switch the player power **ON**, and play the 1 kHz (track 1) on test disc (SZZP1054C).
3. Adjust **VR701 until the RF signal eye pattern amplitude is maximized.** (Shown in Fig. 6)



Ⓑ **Maximize the amplitude.**

(3) CHECK OF PLAY OPERATION AFTER ADJUSTMENT

'Checking Skip Search

1. Play an ordinary musical program disc.
2. Press the skip button to check for normal skip search operation (in both the forward and reverse directions).

'Checking Manual Search

1. Play an ordinary musical program disc.
2. Press the manual search button to check for smooth manual search operations at either low or high speed (in both the forward and reverse directions).

'Checking Playability

1. Play the 0.7 mm black dot and the 0.7 mm wedge on the test disc (SZZP1054C) and verify that no sound skip or noise occurs.
2. Play the middle tracks of the uneven test disc and verify that no sound skip or noise occurs.

■ NEW DIGITAL SERVO CIRCUIT

This model employs a new digital servo circuit. Compared to the old digital servo circuit, the following points have been improved.

1. **Reduced operated noise**
   Loading mechanism 2-level speed reducer
2. **Reduced access time**
   [(old) 2.9 seconds→(new) 1.9 seconds]
   Change of traverse gear
3. **Improved vibration resistance**
   Rubber and spring 2-level floating mechanism
   [fo=50 Hz (old)→20 Hz (new)]
4. **Reduced number of parts**
   Use of a single super IC tip
   3 chips (MN6626, MN6650, MN6475) are reduced to a single chip (MN66271)

■ SELF DIAGNOSTIC FUNCTION

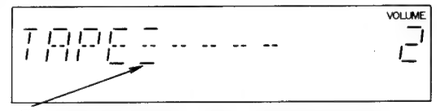
The Self Diagnostic Function is equipped with RX-DT707. Use this function only when you wish to check the following items.
(It is necessary to use the remote controller supplied with RX-DT707 for the self diagnostic function.)

●Check of malfunction of switches (tact switch) on the cobra top.
Use the diagnostic function when a switch on the cobra top is inoperrative.

●Check of all indications on the LCD
●Check of LCD short-circuit
——Use the diagnostic function when an LCD is not displayed correctly.

[How to set the self diagnostic function]
Follow the procedures outlined below to set the self diagnostic function mode before the self diagnostic function.

1. Connect the AC power cord of the RX-DT707 to an AC outlet and turn it on.
2. Press the "4" button and afterward "7" button the remote controller while keeping the TAPE/□ button pressed.
   The indication in Fig. 1 will be displayed.



-- : Denotes the RX-DT707 in the self diagnostic function

Fig. 1

●CHECK OF MALFUNCTION OF SWITCHES (Tact switch on the cobra top)

1. Press the "3" button on the remote controller.
   ●All indications on the LCD will disappear and the LED on the cobra top will blink sequentially from left to right.
2. If you press the buttons on the cobra top in the order of ①, ②, ③ and ④ shown in fig. 2, the LCD will appear in the order as shown in fig. 3.

The LEDs blink sequentially from left to right.

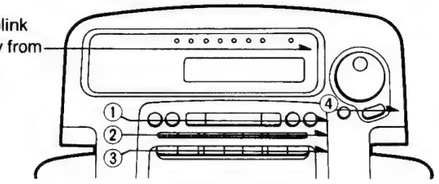


Fig. 2

●The LCD appears in the order as shown in Fig. 3.

Fig. 3

Fig. 4

If the display appears as shown in Fig. 4, the tact switch is normal. If a part of the LCD is not lit, set the self diagnostic function mode again to find the defective switch that cannot light the LCD.

●CHECK OF ALL INDICATIONS ON THE LCD

●Press the "8" button on the remote controller. All indications will appear for about 1 second on the LCD. (Refer to Fig. 5.)
If an indication is not displayed, the LCD or the LCD drive system is defective.

Fig. 5

●CHECK OF LCD SHORT-CIRCUIT

●Press the "9" button on the remote controller. The indications will appear as shown in Fig. 6.
If another indication appears, the LCD is defective.
